AI engineer building multi-agent systems and the infrastructure that makes them measurable: cost accounting, evaluation, and runtime security for LLM agents.

EXPERIENCE

AI Engineer, [US Startup] May 2025 - Present
Remote

- [Internal Project 1], Multi-Agent Pipeline:** Detected pirated CAD software usage by analyzing telemetry and signal patterns.
 - Staged multi-agent pipeline over multi-backend LLM orchestration (fallback routing, stage-specific prompting): 89% precision against a 94% manual baseline at \$0.05/case, down from \$1.06
- [Internal Project 2], Real-Time Voice AI:** Built voice-AI backend for a real-time accent training platform.
 - Built the streaming push-to-talk pipeline end to end: multiple TTS models behind Whisper and FastConformer ASR, model-driven speech control, silence handling
- [Internal Project 3], AI Collaboration Platform:** Built multi-agent infrastructure for an ideation platform (FastAPI + React + PostgreSQL).
 - Built multi-agent group chat with turn-based orchestration and real-time collaboration across agent personas
 - Designed containerized code execution environment and agent session lifecycle with idle cleanup and queue-based concurrency
 - Built custom MCP server, skills system with model tiering, and agent benchmarking framework

GSoC '25 Contributor | '26 Mentor, [Open Source Org] May 2025 - Present

- Built modular multi-agent diagnostic system (log-parser, classifier, recommender) for [CI/CD platform] build failures, across OpenAI, Gemini, and Claude backends
- Added vector-store RAG layer, benchmarked on 20 curated questions: 95% context relevance, 3.75/5.0 overall score

AI Engineer, [EdTech Company]

- Built multi-agent LLM pipelines for adaptive learning content and automated study-plan generation
- Built automated Manim video generation pipeline (CLI + prompt standardization + component library), cutting production time from 5h to 20min
- Implemented hybrid semantic filtering for TTS using regex rules and a fine-tuned Gemma 270M model

Open Source

- Merged upstream fixes across four projects: an incident-management platform, a notebook MCP server (stale-cache fallback, concurrent-miss coalescing), a knowledge-graph memory layer, an LLM tutoring framework
- [RAG Framework] (research incubator): Added 5 API backends (Cohere, Fireworks, Together, Groq, HuggingFace) for embeddings and generation. 7 merged PRs.
- [Major DL Framework]: np.diff and np.log2 via the OpenVINO backend. [Agent Framework]: Exa Answer method, deprecated-model migration across 7+ providers, crawler URL expansion.

AI & Data Science Intern May 2024 - Jan 2025
[AI Automation Co] | [Data Science Co]

- [AI Automation Co]:** automated 19+ workflows (RETELL, Voiceflow, Make). **[Data Science Co]:** fraud-detection model on 6.3M+ records at 94% recall

PROJECTS

- [Project 1]:** Open-source runtime security for AI agents. Trained and shipped a prompt-injection span detector (94.4% recall at 0.5% FPR) that redacts the malicious span, not the whole document. 3-stage pipeline with taint tracking across tool calls; Python SDK on PyPI plus a hosted API. [github.com/redacted](#)
- [Project 2]:** Local-first agent OS. Persistent agents from YAML, multi-model routing (Claude, Codex, LM Studio), agent rooms for collaboration. [github.com/redacted](#)
- [Project 3]:** Runs a fleet of headless coding agents in parallel, each in an isolated git worktree, with a per-provider cost ledger. CLI, MCP server, and plugin; on PyPI. Same task, four backends, priced from the ledger: the cheapest correct run cost 1/115th of the most expensive. [github.com/redacted](#)

EDUCATION

M.Sc. (Hons.) Mathematics & B.E. (Hons.) Electronics & Instrumentation 2021 - 2026
[Top Indian Engineering University]

SKILLS

Languages: Python, C/C++, SQL
ML/AI: PyTorch, Hugging Face Transformers, ONNX Runtime, vLLM, LangChain, MLflow
Infrastructure: Docker, Git, FastAPI, Pydantic, PostgreSQL, MCP, gRPC

ACHIEVEMENTS

- Top 20, Meta Hacker Cup Open AI practice round (13,000+ entrants)
- Winner, Smart India Hackathon 2025
- 4th place, ContextCon (YC Startup School hackathon)
